

James L. Holly, M.D.

November 12, 2015 Response from visitor from China Mr. Eric Liu

Dear Dr. Holly,

Sincerely thanks for hosting us today. The experience of visiting SETMA (including learning from what I read during flight) is wonderful. What I see is that the private-owned health providers have done a great job to deliver the service in US such a market oriented country. It do inspire me. And SETMA is one of most excellent one among them, thanks Jingwei for arranging this.

Today's topic is mainly about Wu Hou's healthcare reform pilot, so I don't ask for time to introduce our company. Since you have plan to China and willing to explore more meaningful initiatives in China, I'd like to take this opportunity to make a brief self-intro. When you come to China, our group and myself personal will all be very happy to host you.

Genesun Holding, it is a fast growing healthcare group(though our major business now is mainly pharmaceutical but we still want to position us as healthcare because we want to our business more and more transferred to it healthcare) in China which has 1 large public company, 4 private owned companies and 3 investment funds. Genesun's vision is "Science Inspire Health." So what we do will be all related to health. I attached a slide which contains more information.

For myself, I worked for Porton and Genesun for years. Now I am the assistant to Group Chairman and Executive Vice President of Uicare. My background is mainly at business and company operation, so I am keep learning how to deliver healthcare. So SETMA is really good teacher for us. I am very appreciate you could mail me a manual to learn. I will learn it carefully with our medical professionals and looking forward we could learn more from you in the future.

Thanks you and your team again and welcome you to China!
