

SETMA's Audit for Quality Improvement for Chronic Renal Disease Stages I, II, III

When the AMA's Physician Consortium for Performance Improvement (PCPI) adopted a measurement set for Chronic Renal Disease, they focused on Stage IV and V. As is seen in this Public Reporting section of our website, CMS' Physician Quality Reporting System (PQRS) adopted the PCPI measurement set without modification. While the measurement set on Stages IV and V is obviously important in order to take timely and appropriate steps to prepare a patient for renal replacement therapy, it does not address the quality of care received by patients with Stages I, II or III. And, it does not address the steps which could delay the progress of renal disease.

As a result, SETMA has developed its own Chronic Renal Disease Measurement Set for Chronic Renal Disease Stages I, II and III. That set is seen below. It addresses:

1. The conditions which contribute to renal disease
 - Diabetes
 - Hypertension
 - Obesity
 - Hyperlipidemia
 - Inactivity
 - Smoking
 - Cardiovascular disease
2. The conditions which are the result of renal disease
 - Anemia
 - Bone disorders
 - Malnutrition
3. The preventive health issues which can be beneficial for patients with renal disease
 - Immunizations
 - Medical nutrition therapy
 - Dietary modification

Finally, the audit measures whether or not the patient has been given a written, personalized Plan of Care and Treatment Plan which enables the patient to "take charge" of his/her care and to make certain that he/she is receiving all of the care which is needed.

It is SETMA's hope that this measurement set may serve as a stimulus for agencies such as PCPI, NQF, AQA, PQRS or others to design and publish a measurement set for Chronic Renal Disease Stages I, II, III. We think that our quality measurement set is a good start in that process.

SETMA's Chronic Kidney Disease Treatment Audit

Has the patient's urinary protein been assessed within the last year?

Yes

Click to Order

Latest Result 0 01/06/2010

Ordered Today

Has the stage of the patient's renal disease been assessed within the last year?

Yes

Click to Update

Stage Stage 1

If the patient has disease of Stage 2 or higher, have they been referred for a Renal Ultrasound within the last 3 years?

N/A

If the patient has disease of Stage 3 or higher, have they been referred to a nephrologist?

N/A

Has the patient been referred to Medical Nutrition Therapy at least once?

Yes

Has the patient had lipid panel within the last year?

Yes

Latest Results 12/10/2009

Cholesterol 126 LDL 44

Triglycerides 287 HDL 24

Has the patient had a prealbumin test within the last year?

Yes

Latest Result 20.40 01/06/2010

Ordered Today

Is the patient's blood pressure controlled to below 135/85 mmHg?

No

Has the patient received a personalized exercise prescription within the last year?

Yes

Click to Update

Date of Last Prescription 01/07/2010

Has the patient received a weight management assessment including BMI, BMR and how to change both within the last year?

Yes

Click to Update

Date of Last Assessment 01/06/2010

If the patient smokes, have they received counseling as to stopping and been given methods of doing so?

Yes

Click to Update

Has the patient received immunizations for ...

Influenza

Yes

Click to Order

Pneumonia

Yes

Hepatitis B

No

Is the patient anemic? Latest HGB 11.8 01/06/2010

No

If so, have the following labs been ordered: B12, Erythropoietin, Ferritin, Folic Acid, Occult Blood, Retic Count?

N/A

Click to Order

Has the renal treatment and plan of care document been generated within the last year?

Yes
